

Understanding Active Directory

Christopher Chapman | MCT
Content PM, Microsoft Learning, PDG Planning , Microsoft

1

Meet Christopher Chapman

- Background
 - IT manager and implementer focused on deploying, maintaining and optimizing networks of all sizes (from SMB to Enterprise)
 - IT Consulting projects include Custom SharePoint for Microsoft IT, Netware/Notes migration to AD/Exchange, Transition to centralized management (250 clients)
 - Instructor and Director of Instruction
- Contact
 - christopherjs@microsoft.com
 - @ChristopherMSL

2

Course Topics

Understanding Active Directory

- 01 | Introduction to Active Directory
- 02 | Active Directory Domain Services (DS)
- 03 | Active Directory Certificate Services (CS)
- 04 | Active Directory Federation Services (FS)
- 05 | Active Directory Rights Management Services (RMS)
- 06 | Active Directory Lightweight Directory Services (LDS)

3

Setting Expectations

- Target Audience
 - IT Help Desk staff interested in moving into Network/Systems Administration
 - Anyone interested in learning more about Active Directory
- Suggested Prerequisites/Supporting Material
 - Microsoft Technology Associate:
 - Exam 98-349: Windows Operating System Fundamentals
 - Exam 98-365: Windows Server Administration Fundamentals
 - Exam 98-366: Networking Fundamentals
 - Exam 98-367: Security Fundamentals

4

Introduction to Active Directory

MVA Microsoft
Virtual
Academy

5

Module Overview

- Active Directory isn't what it used to be!
- What is Active Directory?
- Active Directory Roles

MVA Microsoft
Virtual
Academy

6

What is Active Directory

- What is Active Directory?
 - A collection of services (Server Roles and Features) used to manage identity and access for and to resources on a network

Active Directory Roles

- AD Domain Services (AD DS)
 - Users, Computers, Policies
- AD Certificate Services (AD CS)
 - Service, Client, Server and User identification
- AD Federation Services (AD FS)
 - Resource access across traditional boundaries
- AD Rights Management Services (AD RMS)
 - Maintain security of data
- AD Lightweight Directory Services (AD LDS)

What is AD DS?

- What is Active Directory Domain Services?
 - A directory service is both the directory information source and the service that makes the information available and usable
 - A phone book...

9

What does AD DS do?

- Scalable, secure, and manageable infrastructure for user and resource management
 - stores and manages information about network resources
 - provides support for directory-enabled applications such as Microsoft® Exchange Server
 - allows for centralized management

10

What is AD CS?

- AD CS is the Microsoft implementation of Public Key Infrastructure (PKI)
- PKI is a set of hardware, software, people, policies, and procedures needed to create, manage, distribute, use, store, and revoke digital certificates

11

What does AD CS do?

- AD CS provides customizable services for issuing and managing digital certificates
 - Certification Authorities
 - CA Web Enrollment
 - Online Responder
 - Network Device Enrollment Service (NDES)
 - Certificate Enrollment Web Service
 - Certificate Enrollment Policy Web Service

12

What is AD FS?

- A software component that facilitates the cross-organizational access of systems and applications

What does AD FS do?

- The AD FS server role provides simplified, secured identity federation and Web single sign-on (SSO) capabilities.
 - enables the creation of trust relationships between two organizations
 - provides access to applications between organizations
 - provides Single Sign-on (SSO) between two different directories for Web-based applications

What is AD RMS?

- Active Directory Rights Management Services (AD RMS) is an information protection technology that works with applications to safeguard digital information

What does AD RMS do?

- Allows individuals and administrators to specify access permissions to documents, workbooks, and presentations
 - prevent sensitive information from being printed, forwarded, or copied by unauthorized people
 - access and usage restrictions are enforced no matter where the information is located

What is AD LDS?

- AD LDS is a hierarchical file-based directory store
- AD LDS is both the directory information source and the service that makes the information available and usable

What does AD LDS do?

- Lightweight Directory Access Protocol (LDAP)
 - Directory service that provides flexible support for directory-enabled applications, without the dependencies and domain-related restrictions of AD DS
 - provide directory services for directory-enabled applications without incurring the overhead of domains and forests
 - no requirement for a single schema throughout a forest

Thanks for Watching!
